203

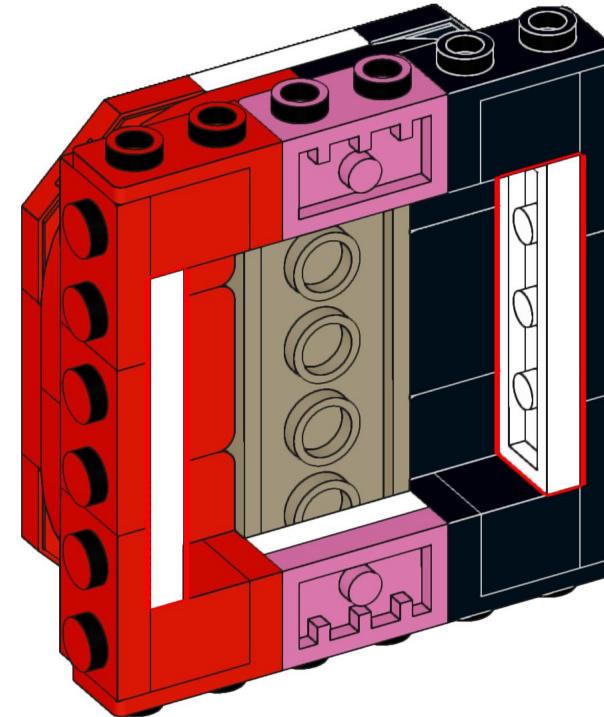

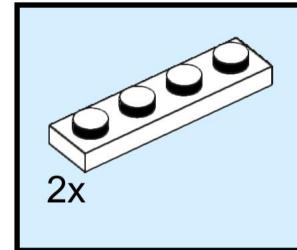

Note: these red brackets are likely missing, and can be skipped without issue.

If the brackets are missing, just add the 1X 1 bricks on their own

204

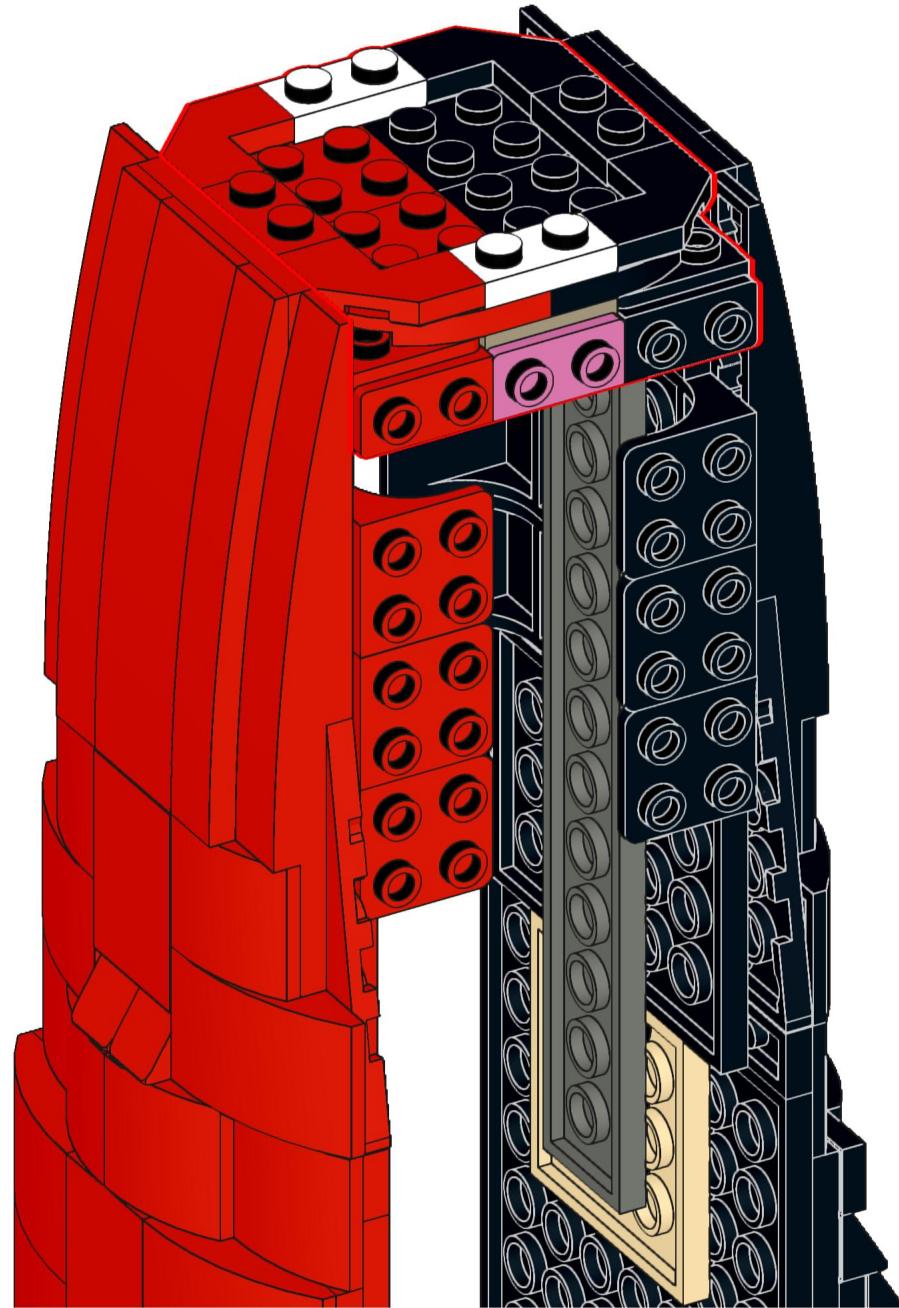

205

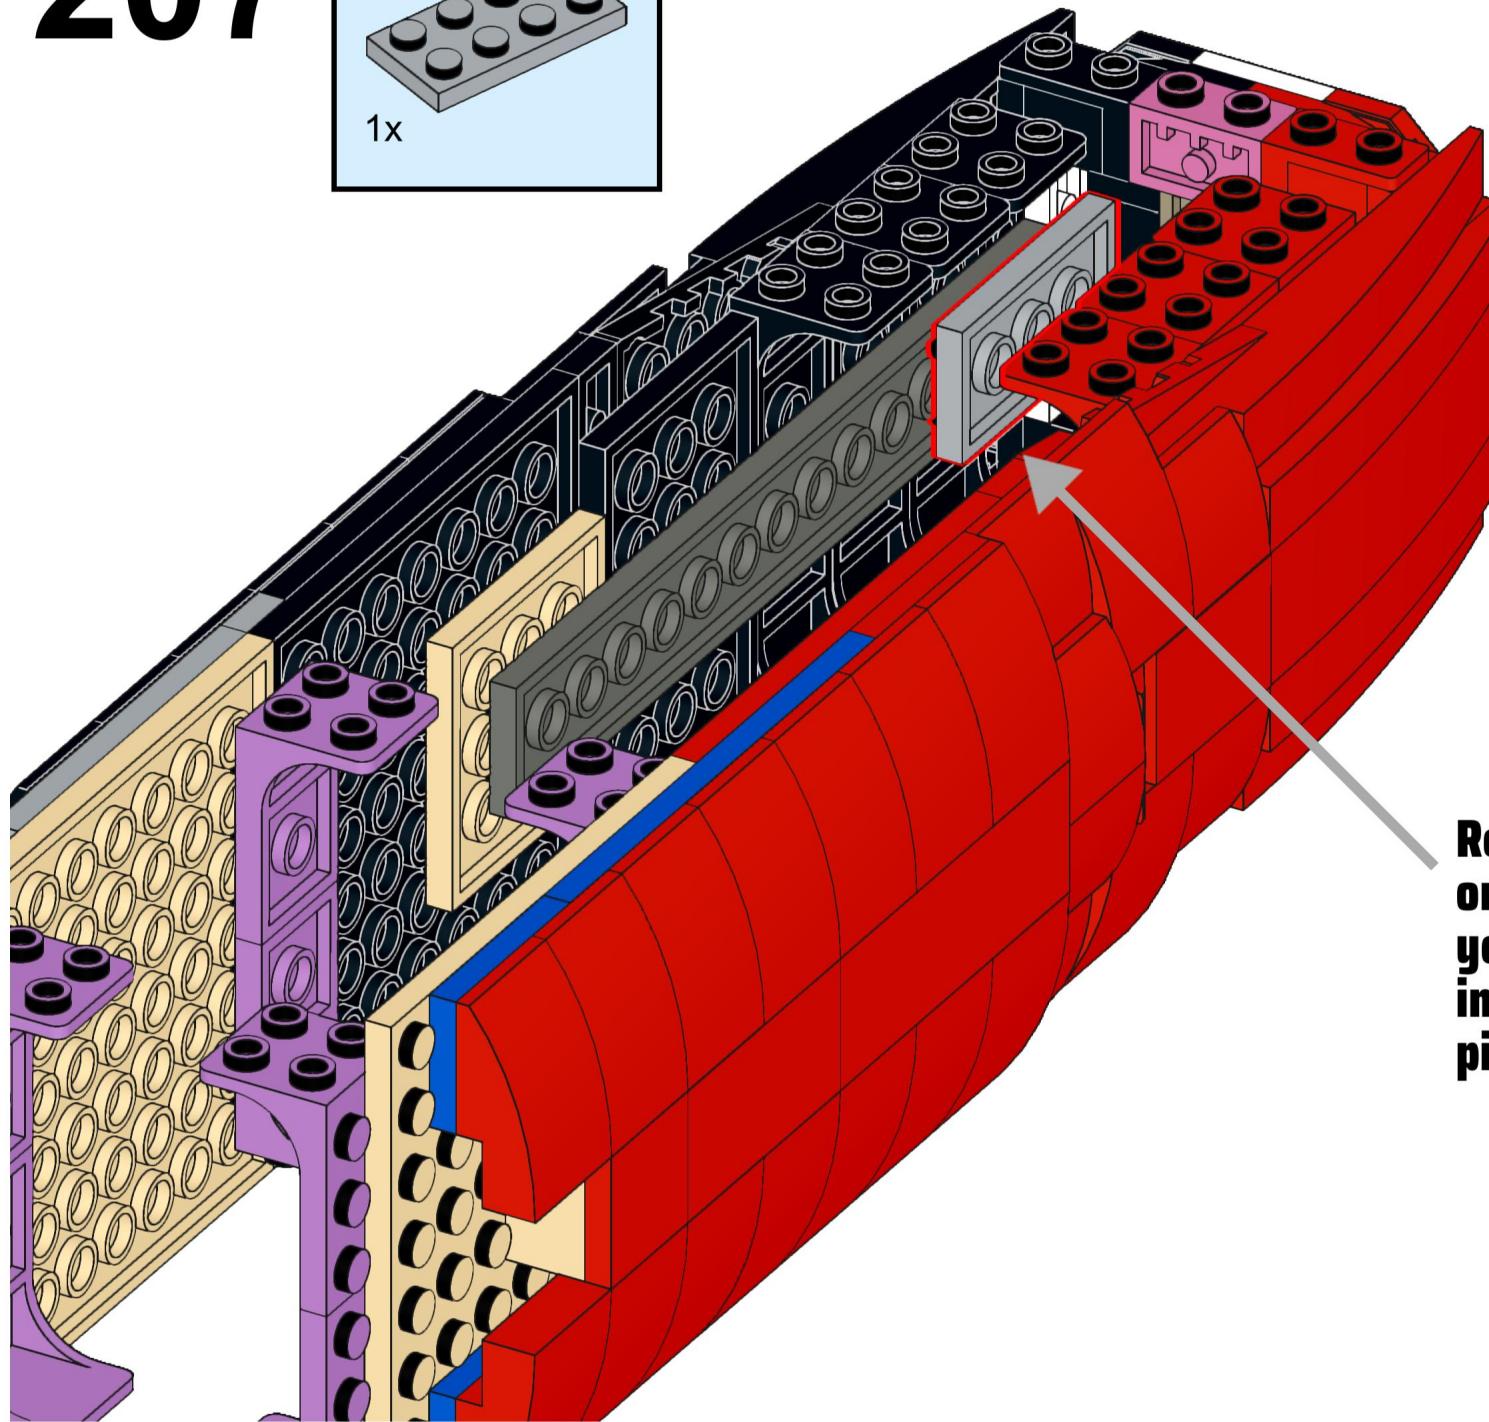

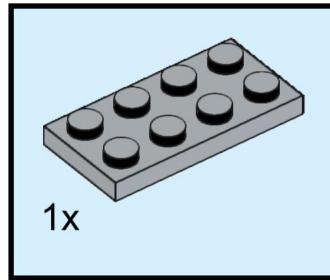

206

When connecting the two panels, to the new front plate, they should be resting on a level surface and set aside.

They won't be secure until we attach the port side panel, which is put together starting in the next step

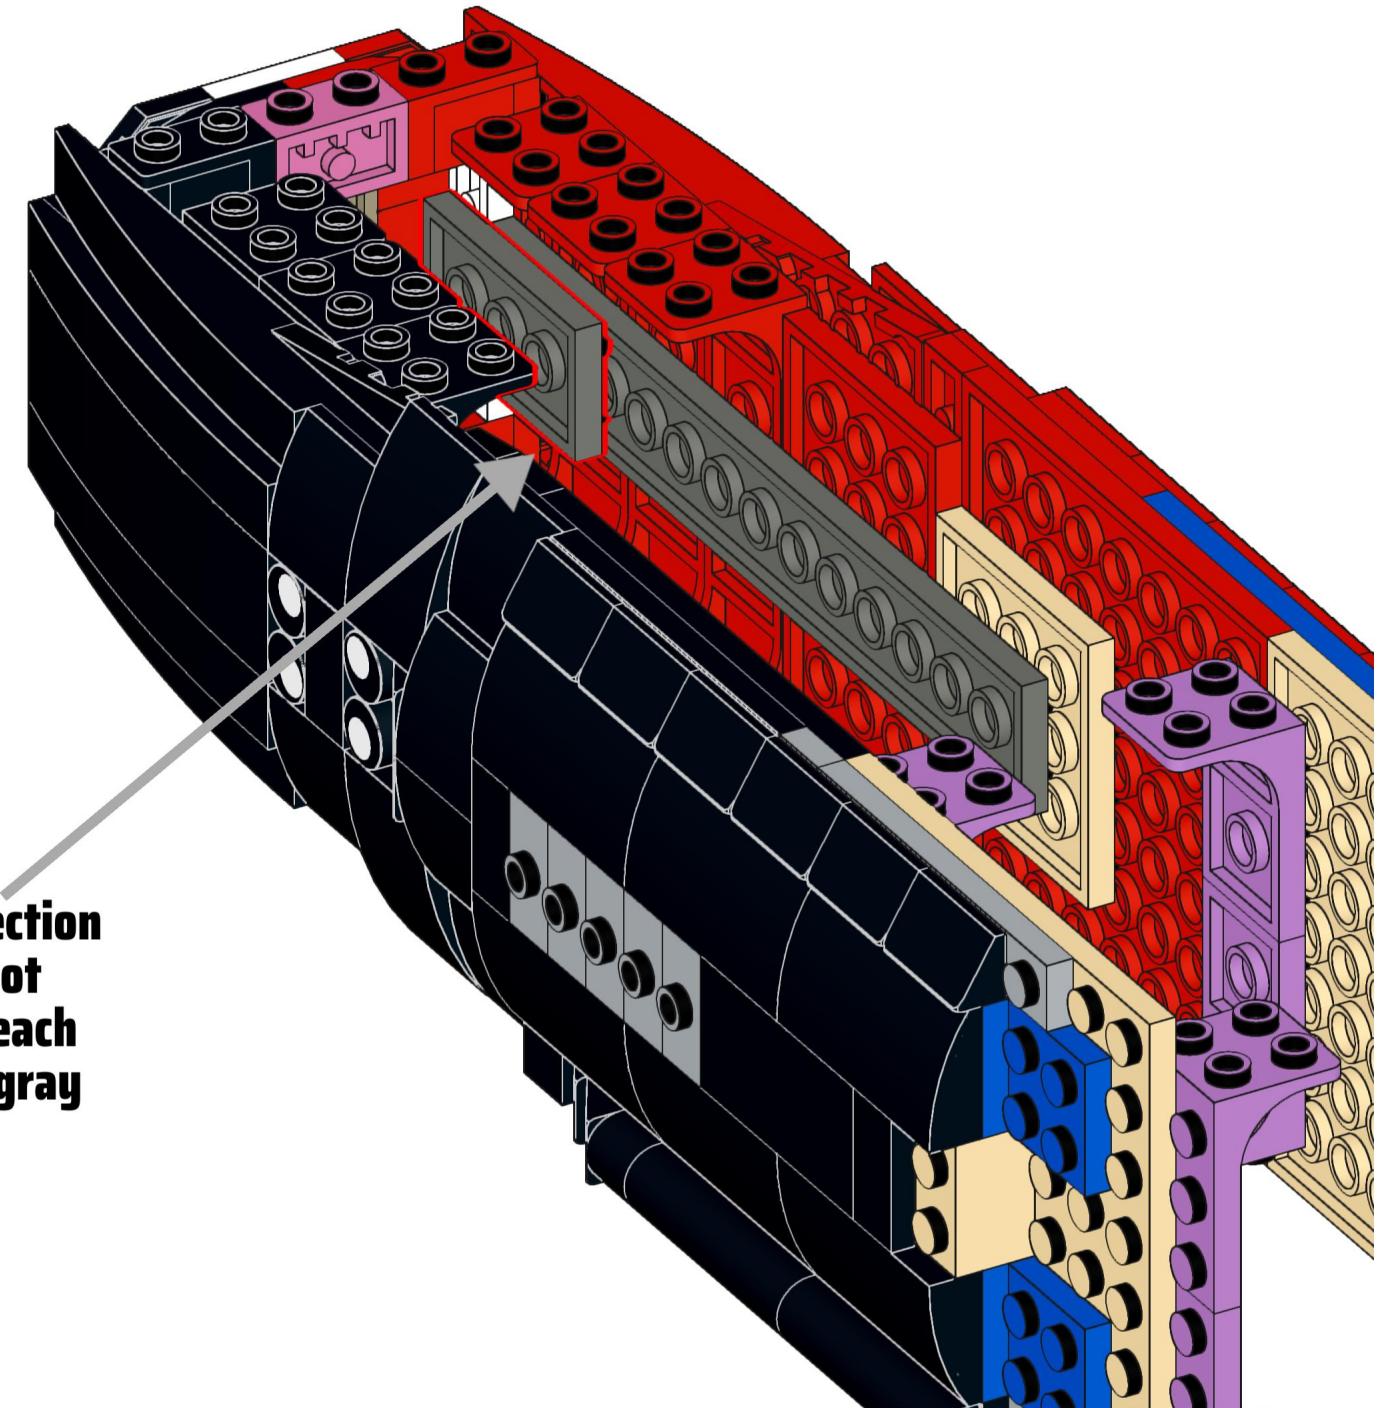

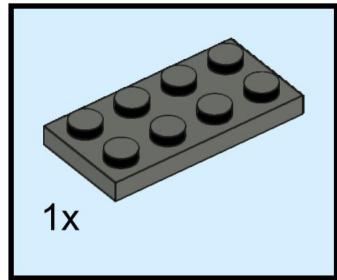

207

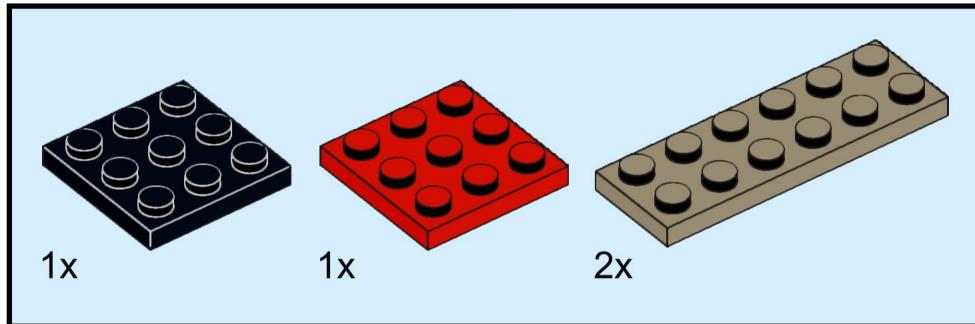

Recommendation: rest this section on a level surface (since it's not yet securely attached), and reach in carefully to press the new gray piece into place.

208

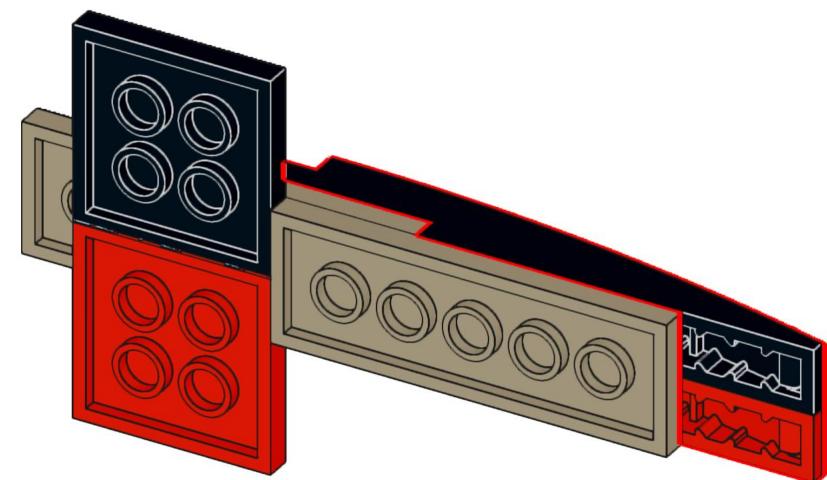

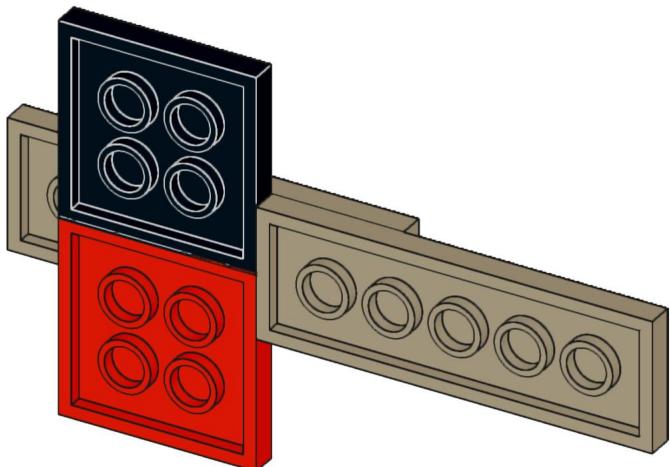

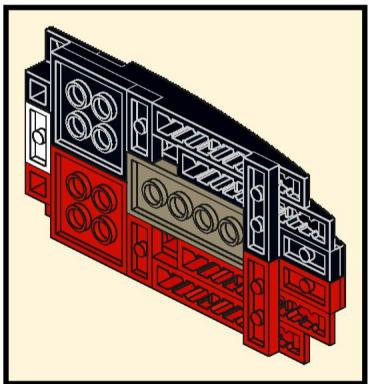

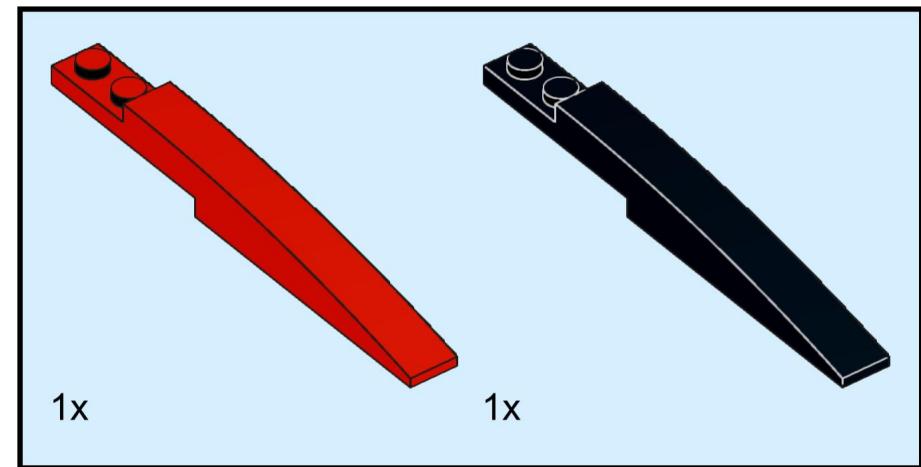

Recommendation: rest this section on a level surface (since it's not yet securely attached), and reach in carefully to press the new gray piece into place.

Place the starboard side down, on a level surface, as shown.

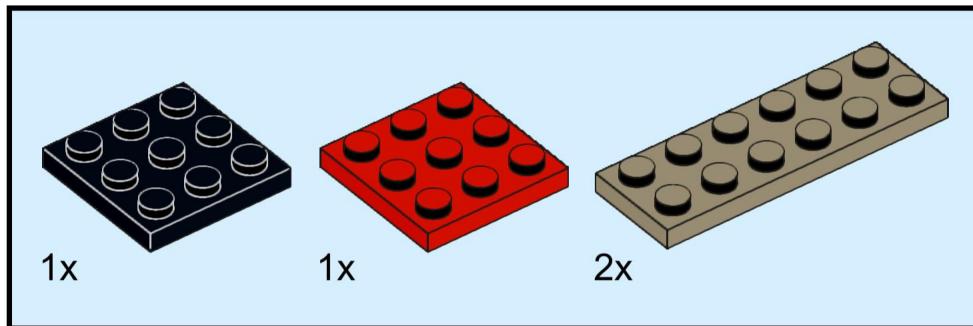

Gently but firmly push the new port side panel into place, paying attention to where the bracket connecting points are, and pushing primarily in those areas to secure the connection

**Place the port side down, on a level surface.
Optional: put a towel on the surface,
to help support the rounded port side that's facing down**

**Gently but firmly push the new starboard side panel into place,
paying attention to where the bracket connecting points are, and pushing
primarily in those areas to secure the connection**

**Can attach more firmly in later steps.
For now, focus on pressing together
these areas, with the current
attached brackets, and gently set
aside - the next bottom panel will
make this connection more stable.**
